# SIP Weekly Update

Week ending 3 Apr 2026

# Performance

# Performance [Mar EOM Projection]: Topline missing target with 94% / 96% RR mainly due to higher than expected Raya holiday impact to local SIP; P&L -$201k vs target mainly due to planned comms rebate reinvestment in PH

## Topline highlights by BU

**Local SIP: 146k ADO, 97% RR (99% excl. KH); $1.53M ADG, 99% RR; ADO -4.8k** below target due to 1) **-3.4k** from VNKH target set too high by local PMO (3.4k target vs 43 actual); 2) **-1.9k** from MY/SG raya holiday impact higher than expected; partially offset by 3) **+0.5k** outperformance from TH/TW; **working in progress for post-Raya recovery.**

**CNSIP: 25k ADO, 86% RR; $220k ADG, 87% RR; ADO -4.1k** below target due to 1) **-2.0k** due to no new sellers in Feb (CNY pitching pause) and pitching approach change to opt-in from Mar; 2) **-1.1k** from seller loss who failed eKYC; 3) **-1.0k** from CNAR target set too high by local PMO (1.9k target vs 0.9k actual); **next to revise topline targets based on structural headwinds; update at Apr monthly meeting.**

**Swarm: 1.3k ADO, 35% RR; $20k ADG, 58% RR**; missing target due to 1) 40% price increase MoM to restore P&L health; 2) Seller/SKU ramp up slower than expected; **next focus on SKU/seller acquisition to grow topline.**

**Direct selling**: **32k ADO, 97% RR, CB% +0.1pp MoM; $491k ADG, 93% RR, CB% +0.2pp MoM**; slightly missing target due to 1) MYSG SKU per seller lower than expected, next step to encourage sellers to sync more SKUs; 2) VN SKU effi lower than expected as ABS increased in Mar, likely due to sellers revising up their prices after giving large discounts for Tet/CNY in Feb.

**WH cross-selling**: **6.6k ADO, 96% RR, CB% +0.0pp MoM; $50.4k ADG, 100% RR**; ADO slightly missing target due to CB FBS topline lower than expected in 2H-Mar; still deep-diving with MYCB.

## Seller P&L highlights

**SIP seller P&L: $0.7M, $201k below target;** mainly due to local SIP 1) **-$156k** from reinvesting comms rebate in PH as planned; 2) **-$94k** higher COD losses in IDMY & VNMY likely due to higher failed delivery/buyer absence during Raya holiday (WIP analysis); 3) **-$27k** from lower topline.

# Total P&L [Mar EOM Projection]: Seller+SLS+MP P&L $3.9M, +563k above target mainly driven by MP PC2 outperformance across all BUs from higher ads investment and lower PRM

**Highlights**

**SIP (3 BUs total): $3,876k, +$563k above target** mainly driven by outperformance across all 3 SIP BUs.

- **Local SIP: $3,388k, +$209k above target** mainly driven by MP PC2 outperformance +380K USD as (i) ads investment in MY & PH exceed target levels and (ii) PRM support reduction in key markets SG & PH; though partially offset by seller P&L underperformance -277K USD (details on previous slide).
- **CNSIP: $455k, +$254k above target** mainly driven by higher than target level of paid ads spending which help to uplift TR above CIR particularly in BR/TH/SG.
- **Swarm: $33k, +$100k above target** mainly driven by 1) standalone P&L outperformed by +70K (lower topline reduced loss) and 2) MP PC2 improved +35K from reduced PRM support in key markets: VN, MY, TH, PH.

# BWT [Mar MTD]: Top lane performance impacted by Raya seasonality, capacity constraints, and transit delays. Performance recovered and stablized by end-Mar.

**Highlights**

- **IDMY 93% RR, +0.9 days MoM:** Flight cancellations impacting EM shipment; LM capacity constraints during Raya. Vendor has rerouted transit point as mitigation. Performance stabilized since 30 Mar.
- **IDPH 96% RR, +0.1 days MoM:** LH 1 day delay due to continuous offloads and terminal congestion at KUL transit. Performance stablized since 30 Mar.
- **VN Export:** Recovery from Tet slower than expected. Seller prep time remains elevated at 1.3 days (+0.4 days vs. M-2), FM capacity constraints due to overlapping Tet + 3.3. Impact (+0.4 days vs. M-2). Performance stabilized since 17 Mar.
- **VNMY 91% RR, +0.4 days MoM:** LM LT increased by 1 day in W4 March due to Raya holidays' impact; MY SPX experience capacity constraints from 18 - 22 March in both SOCs operation and pickup arrangement. Performance recovered for orders arrived after 28 Mar.
- **MY Export:** Insufficient manpower for FM pre/post Raya + WH part-time attendance low, causing FM and WH LT +1 day each. MY-PH MNL route experience capacity constraints causing shipment to experience 1-2 days for departure. Actions taken: 1) raised bonus to attract more WH PTs; 2) reworking cut-off time with FM/LH vendors to clear backlogs; 3) exploring WH process optimization by Q3.

## Highlights

1. **Shop CR fluctuations mainly driven by agent CR.**
   - Agent CR fluctuated due to low CR from a few new agents, performance has recovered after upselling refresher training being conducted
2. **Chatbot CSAT and agent CSAT fluctuations within expectation.**
   - Chatbot CSAT fluctuations driven by old chatbot, from occasional declines in good CSAT responses. DSAT stable.
   - Agent CSAT dropped on 27-28 Mar due to buyers pushing for faster delivery, agents followed up with SLS team on orders exceeding EDD
3. **Chat DR behind target due to low DR from new chatbot.**
   - New chatbot adoption: 30% of IDSG shopchat vol; 50% of non-IDSG shopchat vol; adoption % based on agent capacity.
   - Next: Improve new chatbot DR via listing quality enhancement and backend optimization. Image translation enhancement feature under development. Once DR improves, scale new chatbot adoption to uplift overall CSAT.

## Highlights

1 **All agent metrics on track in March.**
- Presale CR: slight drop expected post Raya peak; performance recovered in the next week
- Agent CSAT: higher DSAT during Raya peak, driven by MY buyers purchasing festive necessities and pushing for faster delivery, performance recovered post Raya

2 **Chat DR: behind target due to low DR from new chatbot.**
- New chatbot adoption: 30% of IDMY shopchat vol; 50% of non-IDMY shopchat vol; adoption % based on agent capacity.
- Next: Improve new chatbot DR via listing quality enhancement and backend optimization. Image translation enhancement feature under dev.

## Highlights

1. **Shop CSAT fluctuations mainly driven by chatbot CSAT.**
   - Chatbot CSAT: fluctuations driven by old chatbot, from occasional declines in good CSAT responses. DSAT stable.
   - Agent CSAT: hit target, most DSAT is caused by sellers not shipping out on time, follow-ups with such sellers are being handled by L2 agents.
2. **Agent CR missed target caused by increased chat volume from IDPH Direct Selling.**
   - IDPH agents have limited capacity for upselling, aligned with ID team to return chats to Direct sellers to relieve capacity constraints, ETA April.
3. **Chat DR behind target due to low DR from new chatbot.**
   - New chatbot adoption: 30% of IDPH shopchat vol; 50% of non-IDPH shopchat vol; adoption % based on agent capacity.
   - Next: Improve new chatbot DR via listing quality enhancement and backend optimization. Image translation enhancement feature under dev.

**Highlights**

- **MY import 99% RR, +3% MoM:** IDMY leading with 104% RR despite temporary seller/SKU drop due to Raya holiday. VNMY lagging at 69% RR as Tet recovery is slower/weaker than expected.
- **SG import 93% RR, +3% MoM:** MYSG/VNSG lagging due to 1) slower-than-expected seller recovery/acquisition during CNY/Tet/Raya; 2) non-performing SKU unlisting post listing exemption expiry - grace period extended to 19 Mar. Long-term SG import has seller/SKU supply growth constraints due to stricter import criteria (Direct sellers need proven topline/ops record in another Direct market).
- **PH import 113% RR, +3% MoM:** Outperforming IDPH +126% RR and MYPH +118% RR leading growth.

**Apr import market focus**: roll out Direct ads growth program (5% paid ads + 5% PRM) in SG and MY from 1 Apr; finalize roll-out plan for PH by early Apr.

# Topline by export [Mar full-month]: 123k shops, 105% RR, +5% MoM; 12.8M SKUs, 93% RR, -10% MoM. SKU drop mainly due to ID sellers on holiday mode. Apr focus on Mall/managed seller pitching and seller education
