Shopchat

Current Opportunity | Strong revenue uplift potential with improvement in conversion rate and/or user contact rate when compared with top-performing external sellers from different categories

Conversions per Order varies across LOBs with different performance in Contact Rates and Conversion Rates

Metric	CB SCS	Local SCS	Local SBS	Local SIP	SID Shop
A. User contact rate	4.56%	2.87%	12.48%	17.92%	18.74%
B. Conversion Rate [Converted orders / # Conversations	8.02%	16.44%	8.31%	8.81%	10.65%
C. Conversions per Order *[AxB]*	**0.48%**	**0.49%**	**1.19%**	**2.09%**	**2.40%**

Taking Local SCS as e.g., boost in user contact rate to match comparable sellers* can drive higher revenue

Metric	Reg		MY		PH	
	SCS	Ext. Seller	SCS	Ext. Seller	SCS	Ext. Seller
User contact rate	2.87%	5.92%	8.69%	7.11%	4.00%	11.67%
Conversion Rate	16.44%	8.74%	9.19%	6.20%	11.09%	8.63%
Conversions per Order	**0.49%**	**0.52%**	**0.80%**	**0.44%**	**0.44%**	**1.01%**

*Benchmarked against weighted average of comparable, top-performing external sellers (similar ADO, GMV) from different categories

Private & Confidential

Our Plan | Use our ecosystem strengths and agent skills and capabilities to better compete against leading external sellers

Competition space		How do we compete?
Harness as our key advantage	1 Integration with tech. and data	• Implement **proven existing tools** (Chatbot, AI Agent Assistant) to boost sales capability at scale • **Tap into existing data** (e.g., user behaviour) to guide sales decisions and improve insights
	2 Operational excellence	• Build a **strong, reliable ops team** with clear processes and central oversight
Benchmark and compete	3 Sales Enablement	• **Segment and prioritize** sellers for higher impact • Equip agents with the **right skills, knowledge, and best practices** to strengthen pre-sales competencies *(To be further benchmarked against top-performing sellers)*
Difficult to compete	Product knowledge & expertise	• Strengthen product knowledge in sales and chatbot teams to drive up/cross-sell *(Challenging due to broad range of SKUs, categories across business lines)*

x *Deep-dive available*

Part 1 | Use our ecosystem strengths and agent skills and capabilities to better compete against leading external sellers

Competition space		How can we compete?
Harness as our key advantage	1 Integration with tech. and data	• Implement **proven existing tools** (Chatbot, AI Agent Assistant) to boost sales capability at scale • **Tap into existing data** (e.g., user behaviour) to guide sales decisions and improve insights

Tech. Ecosystem [Chatbot] | Internal shops using legacy chatbot lag behind external shops (that empowered by latest LLM chatbot) in terms of buyer satisfaction and business growth

Fragmented use of legacy or no chatbot solutions across internal shops, prevent the ability to capture the full sales benefits enabled by the LLM-powered chatbot

Shop Type	*Current Set-up*	*Chatbot CSAT*	*Shop Conversion Rate*	*Chat Deflection*	*Chatbot Skills*
CB SCS	PH/VN/BR using **own dated LLM** chatbot; Other regions using **own legacy non-LLM** chatbot	51.87%	8.17%	77.80%	Dated LLM chatbot missing latest DS model updates, resulting in increased hallucination and reduced response accuracy
CB Lovito	All regions are using its **own legacy non-LLM** chatbot	N/A - Not analyzed due to not migrated to IHS			non-LLM chatbot lacks good buyer intent comprehension
CB SIP	All regions are using its **own legacy non-LLM** chatbot	35.22%	9.61%	63.11%	non-LLM chatbot lacks good buyer intent comprehension
Local SBS/SCS	Partial ID SBS using own dated LLM chatbot; Other region shops **no chatbot in the past**	N/A - Local SBS/SCS has no chatbot in the past			N/A
External Shop	*All regions are using the **latest LLM chatbot***	**80.02%**	**13.44%**	**24.57%**	With updated DS model iterations, empowered with latest pre-sale capabilities (e.g., item rcmd).

Highest buyer CSAT and order conversion rate

Lowest deflection due to loose chat transfer control, can be further improved

Chatbot Skills: High | Medium | Low | N/A

Date Range: 01-16 Mar'25, sources: Link

Tech. Ecosystem [Chatbot] | Transit from the current fragmented use of legacy chatbot across internal shops to a unified, latest LLM-powered chatbot adopted by external sellers

[Current Set-up]
Fragmented use of legacy or no chatbot solutions across internal shops, prevent the ability to capture the full sales benefits enabled by the LLM-powered chatbot

Shop Type	*Current Set-up*
CB SCS	PH/VN/BR using **own dated LLM** chatbot; Other regions using **own legacy non-LLM** chatbot
CB Lovito	All regions are using its **own legacy non-LLM** chatbot
CB SIP	All regions are using its **own legacy non-LLM** chatbot
Local SBS/SCS	Partial ID SBS using own dated LLM chatbot; Other region shops **no chatbot.**
External Shops	*All regions are using the **latest LLM chatbot***

[Future Set-up]
Standardize chatbot by replacing legacy version and deploying the latest LLM-powered chatbot (that alr adopted by external shops) across all internal shops

Shop Type	*Future Set-up*
Internal Shops *(No matter CB SCS, Lovito, SIP or Local SBS/SCS)*	All region internal shops will use **the latest LLM chatbot** that already adopted by external shops
External Shops	

Chatbot Skills:	High	Medium	Low	N/A

te & Confidential

Tech. Ecosystem [Chatbot] | Divide into 3 stages to suit different scenarios: Local SBS/SCS shops are already in toggle-on stage, while CB shops are undergoing AB testing before rollout

Shop Type		1 A/B Testing	2 Toggle on latest LLM Chatbot	3 Enhancing LLM Chatbot (Future Stage)
Local SBS/ SCS	ID SBS	***Skipped*** *(already have ~47% toggled on new chatbot, no need for AB testing)*	***We are here***	
	Other Region SBS	***Skipped*** *(no chatbot in the past)*		
CB	CB SCS	***We are here***	***Planning***	
	Lovito			
	SIP			

Detailed Plan

To toggle on the latest LLM chatbot for SBS/SCS shops accordingly following external shop chatbot rollout progress
[ID] 47% toggled on new LLM bot, the rest using SBS own chatbot, **pending discussion** of when migration
[TW] 100% toggled on
[SG] 77% toggled on; the rest **by end Apr**
[MY] 45% toggled on; the rest **by end Apr**
[VN] 15% toggled on; the rest **by end Apr**
[TH] In pilot run, rollout to more shops **pending discussion**
[PH] pending PH shop list, target to rollout **by end Apr**

Detailed Plan

A/B testing is to evaluate the biz impact of replacing the legacy chatbot with the latest LLM chatbot.
- **[End Mar - early Apr]**, AB testing for VN/BR/PH
- **[Early Apr - late Apr]**, AB testing for SG/MY/TH/TW

Detailed Plan

A/B testing results analysis to be reviewed with respective CB shop biz, it will guide approaches of toggling on new LLM chatbot for CB shops, **targeting end Apr to May**

Private & Confidential

Tech. Ecosystem [Agent Assistant] | To scale the agent productivity and service quality via proven agent assistant solutions from the MP CS and Webchat

Proven solution and biz impact from the existing chat AI agent assistants…

Assistant	Capabilities	Biz Impact
MP CS Agent AI Assistant	*Support CS agents on the E2E chat handling from automating greetings to auto wrap-up case* 	*Reduce agent AHT, bring **2.2M** USD savings yearly*
Webchat Chatbot AI Assistant	*Recommend answers to buyer's inquiries for sellers' quick reply* 	*(Feature is still rolling out, pending quantitative impact)* *Improve seller's prod and chat skills*

…CS IH Shop chat agents work in similar mode

Shop Chat Agents
(vs. MP CS / Seller)

- Common nature of inquiry handling (real-time chat)

- Time pressure and similar productivity goals

- Often require repetitive and info-based reply

- Directly buyer-facing and responsible for fast, clear, accurate response - similar communication style

……

Scaling shop chat productivity and service quality with AI support

Introduce Shop Chat CSIH AI assistant

1 Smart Reply Suggestion

Recommend context-aware responses to common buyer inquiries to minimize agent effort and drive consistency

2 Auto-surfaced Info Panel

Show key buyer/seller/order info in real-time alongside the chat;
Minimize the human error and agent efforts of finding necessary information for buyers

3 Proactive Upsell/Cross Sell

Recommend relevant product links or promo messages to insert during chat;
Turns service chats into sales opportunities, boosts conversion and basket size

Progressively roll-out starting Q3'25

Part 2 | Use our ecosystem strengths and agent skills and capabilities to better compete against leading external sellers

Competition space		How can we compete?
Harness as our key advantage	1 **Integration with tech. and data**	• Implement **proven existing tools** (Chatbot, AI Agent Assistant) to boost sales capability at scale • **Tap into existing data** (e.g., user behaviour) to guide sales decisions and improve insights
	2 **Operational excellence**	• Build a **strong, reliable ops team** with clear processes and central oversight
Benchmark and compete	3 **Sales Enablement**	• **Segment and prioritize** sellers for higher impact • Equip agents with the **right skills, knowledge, and best practices** to strengthen pre-sales competencies *(To be further benchmarked against top-performing sellers)*
Difficult to compete	**Product knowledge & expertise**	• Strengthen product knowledge in sales and chatbot teams to drive up/cross-sell *(Challenging due to broad range of SKUs, categories across business lines)*

x *Deep-dive available*

Operational Excellence [Current Performance] | Sub-optimal performance driven by pain points across governance, agent performance and lack of tracking and management

2

Entity	Division	Cost					UX					Revenue
		Cost per 1K Order	# L1 agents	Cost per Agent	Chat Deflection Rate	Agent Productivity	Shop CSAT	Chatbot CSAT	Agent CSAT	Avg. Response Time (s)	Chat Abandoned Rate	Shop Conversion Rate
Non-MP	Local SBS SCS (1)	14.1	364	$682	66.43%	15.8	70.41%	64.99%	73.45%	53.4	1.30%	11.56%
	CB SCS	5.7	64	$884 (2)	77.80%	11.2	57.21%	51.87%	76.26%	17.3	4.07%	8.17%
	Lovito	20.8	23	$1,227	Pending data tracking in IHS (ETA May)							
MP	CB SIP	38.6	230	$750	63.11%	8.9	52.99%	35.22%	71.76%	36.6	0.51%	9.61%
	CB SID (3)	Data pending			69.84%	14.9	56.40%	43.98%	78.10%	66.8	1.63%	11.27%
Total		**15.2**	**681**	**$742**	**69.75%**	**13.8**	**63.11%**	**52.52%**	**74.36%**	**50.1**	**1.47%**	**10.49%**

Key Gaps Identified:

1. High variation in SPO due to **lack of standardized OKRs and centralized management [Governance]**
   - **CB SCS** has lowest CPO; however this comes at a cost of poor UX and mediocre conversion performance with ~78% of volume deflected to (non-LLM) chatbot (52% CSAT); to reduce deflection to 65% by Jun and increase Chatbot CSAT to 65% by Dec
2. **Lack of active management and sub-optimal agent performance** leading to high costs and poor user experience **[Governance, Agent Performance]**
   - **SIP** has the highest CPO driven by low agent productivity; UX performance is also sub-optimal with ~35% chatbot CSAT
3. **No visibility on performance** as system tracking is not yet enabled **[Tracking and Management]**

Private & Confidential

Operational Excellence [Next Steps] | To create robust governance structure, improve agent capabilities and establish performance tracking to achieve operational excellence

	Governance	Agent Performance	Tracking and Management
Key Gaps	• Lack of Proper Management and Accountability • Scattered operations across locations	• Sub-optimal CSAT, response times and Productivity	• Lack of Standardized Agent Performance Metrics
Immediate Focus *(1-3 months)*	A Define **roles and responsibilities** for all teams B **Centralize CB ops** under CB Reg teams	D **Agent Bucketization**	• Migrating all internal shops to CS IH • Set OKRs for Cost and UX metrics
Medium/ Long Term Plan *(3-6 months)*	C **Centralize SIP ops** • Fully consolidate agents in ID/PH for efficiency and scale	• Enhance QA processes • Refine agent incentive schemes	• Systemised bucketization of CS IH agents by shop type

Ops. Excellence [Roles and Responsibilities] | Regional CS to lead cross-line initiatives; business owners to drive additional efforts beyond Reg initiatives

2A

For Discussion

	Reg CS *(PIC: Vivian)*	Biz. Owner *(CB SCS, SIP, Local SCS/SBS, Lovito)*	Local CS
Initial Metrics, Process, and Systems Standardisation	**Setting the foundation:** • Standardise metrics • System migration • Launch Shop Chatbot • Launch Agent Bucketization	**Ensure Alignment:** • Gather local input • Align plan with Reg CS	**Execution:** • Provide input • Execute aligned changes
Target Setting, Tracking and Monitoring	**Direction Setting:** • Set metrics & targets • Track & review • Advise teams	**Joint Planning:** • Identify Biz needs & Align on targets • Share business input • ***Add local targets / metrics (beyond Reg CS)***	**Support:** • Share feedback • Provide updates
Driving Process Changes	**Standardization:** • Standardising RC codes, SOP frameworks • Lead across-biz projects	**Biz Specific Processes:** • Coordinate the local biz team • Feature request • ***Run additional initiatives (beyond Reg CS)***	**Implementation:** • Execute agreed changes

Private & Confidential

Ops. Excellence [Centralize CB ops] | No unified oversight across business lines; CB SCS centralizes CS agent mgmt. SIP, Local SCS/SBS agent mgmt. lie within the local MP and SBS CS

CB SCS
(Centralized)

CB SCS Centralizes CS Agent Management located in VN

Buyer market	CS agent location	Managed by
SG	VN	CB SCS
MY		
TW		
PH		
VN		
TH		
BR		
CO/CL/MX		

Centralized for cost and efficiency, **at the cost of service quality**

SIP
(Decentralized)

Most SIP agents are managed by the local MP CS team, except for PH (by local SBS team)

Buyer market	Seller market	CS agent location	Managed by
SG/MY/PH	IDSIP	ID	ID MP CS
SG	all SIP except ID	MY	SG MP CS
MY	all SIP except ID	MY	MY MP CS
TW	all SIP	MY	MY MP CS
PH	all SIP except ID	PH	PH SBS CS
VN	all SIP	VN	VN MP CS
TH	all SIP	TH	TH MP CS
BR	all SIP	BR	BR MP CS
CO/CL/MX	all SIP	CO	CO MP CS

Agents distributed across multiple locations, difficult to be managed centrally

Local SCS/SBS
(Decentralized)

Local SCS/SBS teams are managed by either SBS or MP CS

Buyer market	CS agent location	Managed by
SG	PH	SG MP CS
MY	MY	MY SBS CS
TW	TW	TW SBS CS
PH	PH	PH SBS CS
VN	VN	VN MP CS
TH	TH	TH MP CS

Different local SCS suppliers and warehouses, hard for central mgt.

Ops. Excellence [Centralize CB ops] | Recommend SIP to shift to centralized regional model in the short term for rapid performance improvement

2B

		Decentralised	Local	Central	Centralised	Local	Central
Scope	Performance target setting	Each market defines **own KPI metrics and targets**	R/A	I	Central **sets and cascades** unified KPIs	R/I	R/A
	WFM	Local teams plan shifts and headcount	R/A	I	Central **forecasts, allocates, and manages** workforce planning	R	R/A
	Training & QA	Training and QA **developed and delivered locally**	R/A	I	Central **owns and enforces** training and QA standards	R/C	R/A
	SOP & knowledge mgt.	Local teams **define own SOPs and knowledge base**	R/A	I/C	Central codifies **standardized playbooks** and enforces across markets	R/C	R/A
	Tools & systems	**Different tools** used in each market	R/A	I	**Unified CS platform and dashboards** managed centrally	I	R/A
Overall evaluation	Span of control	✖ Weak, variability in operations and service quality			✔ Strong, uniformity in service quality, KPIs, tooling		
	Resource deployment	✖ Fixed resources in markets, potential inefficiency			✔ Dynamic and flexible deployment of talents		
	Growth potential	✔ Better understanding of local markets ✔ Agility in local decision making			✖ May lack nuance in seller/customer behaviour ✖ Slower reaction to market-specific issues		
Example		DAISO JAPAN • Franchise / licensing operating model • Country-specific policies and CS portals			IKEA • Standardised service policies & procedures • Unified platform & global tools incl. KM and QM		

Recommendation:

- Implement a centralised model with Local SIP to **drive performance and oversight**; if successful, extend to SBS/SCS
- Once **operational excellence is established**, can decentralise some aspects **to balance local insight with ops scale** for long-term growth

R-Responsible; A-Accountable; I-Informed; C-Consulted

Ops. Excellence [Centralize SIP ops] | Propose SIP centralisation in PH by Q3 2025 except ID agents remain in ID, with annualised saving of $0.54M

2C

Pending SIP decision after 15 Apr

1

SIP centralise in PH by Q3 2025

21.6% cost saving of overall SIP
$0.54M in ARR

SIP to PH

Market	Projected HC Dec 25	Current Arrangement			Proposed Arrangement			Annual Savings

3	LMS			✔ *SG, MY*		✔ *SG*
	Survey Invitation Rate		✔ *CN*			
4	Order Conversion		✔ *CN*			

Source file: link

Key observation

1. **CSAT, Productivity, and QA Score** are the most used metrics across all teams, with minor team-specific variations
2. **FRT and AHT** are also widely used, followed by **Attendance, Chat Rate and Reply Time**
3. **Niche metrics** e.g., LMS and Survey Invitation Rate are team-specific with limited use
4. **Order conversion**, a key metric for pre-sale agent performance, is now exclusively used by CN Lovito

Ops. excellence [Agent Bucketization] | Agent performance is measured by Prod., CSAT, and QA Score, prioritized to enhance UX and service consistency across markets by Jun 25

2D

Metric Group	Agent Bucketisation Metrics	Description	Definition	Reg recommended Weightage (%)
Efficiency	Inbound Productivity	• Tracks Agents efficiency, measures work done by CS Agents	Inbound Contacts handled / Productive Hours	35%
	Outbound Productivity		Outbound Contacts handled / Productive Hours	5%
Quality	CSAT	• Measures User's satisfaction in the interaction • Helps identify User's dissatisfaction with Agent or Process issues	All good CSAT / (all good + bad CSAT)	30%
	QA Score	• Tracks the quality of responses given by Agents and adherence to SOPs/ guidelines	Sum of QA score / # of audits	15%
	Pre-sales Conversion Rate	• Measures an agent's effectiveness in converting customer inquiries into actual purchases	No. of pre-sales inquiries that resulted in a purchase / Total Pre-sales Inquiries	15%
Discipline	Zero Tolerance Policy (ZTP)	• Tracks Agent extreme violations in interactions • Includes QA ZTP metrics and Bucketization ZTP	Attendance, Gaming system, Shopee Reputation, Financial loss, Agent Language use, Personal Data Breach, Poor user experience	**Disqualifier** (reverts Agent's overall grade to D)

Weightage for the respective metrics can <u>be modified by local market</u> but some Regional guidelines to be set to ensure key metrics weightage builds bulk of scope

1. Productivity - Minimum 30%
2. CSAT - Minimum 30%

To roll out bucketization with shopchat by May 2025

Different from MP

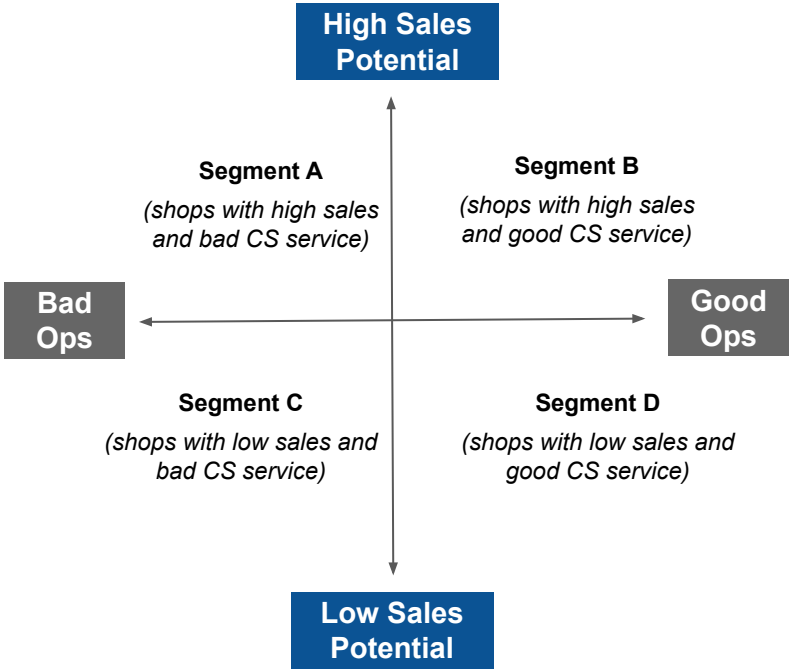
Privileged & Confidential

Part 3 | Use our ecosystem strengths and agent skills and capabilities to better compete against leading external sellers

Competition space		How do we compete?
Harness as our key advantage	1 Integration with tech. and data	• Implement **proven existing tools** (Chatbot, AI Agent Assistant) to boost sales capability at scale • **Tap into existing data** (e.g., user behaviour) to guide sales decisions and improve insights
	2 Operational excellence	• Build a **strong, reliable ops team** with clear processes and central oversight
Benchmark and compete	3 Sales Enablement	• **Segment and prioritize** sellers for higher impact • Equip agents with the **right skills, knowledge, and best practices** to strengthen pre-sales competencies *(To be further benchmarked against top-performing sellers)*
Difficult to compete	Product knowledge & expertise	• Strengthen product knowledge in sales and chatbot to drive up/cross-sell *(Challenging due to broad range of SKUs, categories across business lines)*

x *Deep-dive available*

Sales Enablement [Seller Segmentation] | We plan to categorize shops in 4 segments to assess the current and optimal shop coverage across business lines



High Sales Threshold: GMV, ADO, Conversion Rate

Good Ops Threshold: Contact Rate, ART, AR

To Prioritize

Segment	Sales Potential	Ops Capability	ShopChat Role	ROI Potential
A	High	Low	Full CS coverage to plug gaps	High
B	High	High	Agent-led support with focus on pre-sales	Medium
C	Low	Low	Chatbot-led, scaled support	Low
D	Low	High	Minimal touch, reactive only	Very Low

Sales Enablement [Competency build] | Adopt product-based and functional agent segmentation to create a competent, specialized salesforce

3

	Functional segmentation	Product-based segmentation
	 Agents to specialize along the **customer journey** to focus on specific task types (e.g., lead generation)	 Agents to specialize along **major product categories** (e.g., home appliance, fashion)
Rationale	✔ **Dedicated salesforce** capabilities ✔ **Product knowledge** of selected best-selling, highest-priced items	✔ Drive higher **product / market knowledge** to better serve user needs
Scale required	>10 HC to minimize productivity impact *(to be further validated)*	>100 HC to ensure sufficient coverage of all categories *(to be further validated)*
Benchmark sellers	**Apple** - store **sales specialists** vs. "Genius Bar" (post-sales enquiries)	**Sephora** - specialized **beauty chat advisors** to recommend products
Recommendation	**High priority** - Required to develop **differentiated sales competencies** for markets with medium to large scale	**Med priority** - Roll out only for specific markets and categories with significant scale

Deep-dive on next page

Sales Enablement [Competency build] | Two different options to split between post and pre-sale agents; to prioritize operational routing, training first before further splits

	Phase 1: Hybrid Pre-sale/Post-sale split	Phase 2: Complete Pre-sale/Post-sale split
Operational routing	**Partial split** - route to pre-sale specialist but cross-share resources during high traffic sessions to maximize operational efficiency	**Complete split** - pre-sale enquiries to be **fully managed** by pre-sale specialists only
Training	**Complete split** - selected agents and TLs with more experience **to specialize and train** in commercial and pre-sale techniques	
Performance management	**Partial split** - all agents to share similar KPIs; higher conversion rate targets for pre-sale specialists	**Complete split** - pre-sale specialists to have dedicated set of KPIs aimed at incentivizing sales
	Recommendation: Adopt for **all teams** with reasonable team size	**Recommendation:** Adopt for teams with **sufficient scale** and **higher ops. efficiency**

Note: Shift towards Chatbot for post-sales, more transactional

Appendix

CB SCS Performance | Low CSAT at ~40-50% for SG, VN and BR; MY and TH at ~2x cost per 1K order vs. most markets due to lower deflection rates - providing above avg. CSAT

	Market	Cost					UX					Revenue
		Cost per 1K Order	# L1 agents	Cost per Agent	Chat Deflection Rate	Agent Productivity	Shop CSAT	Chatbot CSAT	Agent CSAT	Avg. Response Time (s)	Chat Abandoned Rate	Shop Conversion Rate

4	BR	3.0	7	$1,040	85.59%	12.2	50.99%	49.68%	60.31%	14.9	7.05%	4.33%
	MX,CL,CO	Data pending			80.99%	12.9	40.45%	33.33%	80.00%	17.7	12.31%	2.38%
	Reg	**5.7**	**64**	**$884**	**77.80%**	**11.2**	**57.21%**	**51.87%**	**76.26%**	**17.3**	**4.07%**	**8.17%**

1. **SG, VN, PH:** Low cost per 1K orders at ~$4 driven by low agent costs; however high scope for improvement in Chatbot CSAT
2. **MY, TH:** Slightly higher Cost per 1K orders (~$10) due to higher agent costs (TH) and lower deflection rates; the cost is balanced against relatively better CSAT (~65% vs 57% reg. avg.)
3. **TW:** Cost per order is significantly high due to low order volumes; however with only 3 agents, this can be de-prioritised for now
4. **BR:** Low cost per 1K orders at ~$3 driven by high chatbot deflection and agent productivity; however we can focus on improving shop conversion rate (4% vs 8% reg. avg.)

Next Steps:
- ***Switch to latest LLM bot***
- ***Turn on transfer logic for good buyer experience (i.e. allow unclear intent transfer)***

Date Range: 01-16 Mar'25; # of Agents and Cost per Agent data based on Dec'24

Private & Confidential

Local SBS/SCS Performance | SG and MY have high scope of improvement in Agent and Chatbot CSAT; TW and VN bear more expensive operations due to high agent costs and low/ no deflections

	Market	Cost					UX					Revenue
		Cost per 1K Order	# L1 agents	Cost per Agent	Chat Deflection Rate	Agent Productivity	Shop CSAT	Chatbot CSAT	Agent CSAT	Avg. Response Time (s)	Chat Abandoned Rate	Shop Conversion Rate
1	SG	17.2	10	$856	28.78%	8.6	66.52%	41.44%	69.44%	60.0	0.54%	13.89%
2	MY	8.8	32	$600	39.14%	13.4	64.73%	57.44%	66.50%	50.4	1.36%	10.94%

2	PH	6.6	34	$688	NA	9.8	NA	NA	81.14%	46.4	0.52%	9.73%
	Reg	**14.1**	**364**	**$682**	**66.43%**	**15.8**	**70.41%**	**64.99%**	**73.45%**	**53.4**	**1.30%**	**11.56%**

4

1. **SG:** Cost per 1K orders close to regional avg. (~14) despite low chat deflection rates to manage Shop CSAT (Chatbot CSAT at 41%); Agent Productivity also significantly low
2. **MY, ID, PH: Low Cost per 1K orders** due to **cheap agent costs and high agent productivity (MY, ID)**; however CSAT remains below average for MY and ID
3. **TW, VN: Cost per 1k order is significantly high** due to **low order volumes, high agent costs** and **low/ no chatbot deflection**
4. **Shop Conversion Rates consistent** across markets at ~11-12%

Next Steps:
- ***100% in rollout of chatbot LLM model in MY and SG***
- ***Explore increase in chatbot deflections after LLM model rollout***

Date Range: 01-16 Mar'25; # of Agents and Cost per Agent data based on Dec'24

[Productivity] CB SCS and Local SBS/SCS | Utilisation gaps in PH, MY, and SG (<60%) drove productivity inefficiencies; local SBS in PH and SG showed <10 productivity due to low demand

MKT	BL	Productivity metrics				Supporting metrics				
		Prod.	AHT	Utilization	Max conc.	Actual conc.	Agent FRT (sec)	Agent ART (sec)	Occupancy	Chat / hour
CN	CB SCS	11.1	14.5	69%	4.3	2.9	14.3	17.1	0.9	14.1
TW	Local SBSSCS	21.1	9.8	97%	3.5	3.4	36.2	15.9	1.0	21.7
TH	Local SBSSCS	18.3	5.8	71%	2.3	1.7	25.6	29.8	0.8	19.0
PH	Local SCS	14.4	7.3	59%	3.0	1.8	29.1	35.6	0.9	14.9
PH	Local SBS	8.3	8.4	37%	3.0	1.1	34.5	60.1	0.7	8.5
MY	Local SCS	12.9	9.5	56%	3.3	1.9	10.7	32.9	0.8	13.1
MY	Local SBS	13.0	14.1	89%	3.4	3.0	12.6	56.7	1.0	13.1
ID	Local SBS	16.8	7.4	68%	2.9	2.0	33.6	22.6	0.8	17.8
SG	Local SBS	7.9	9.3	41%	3.0	1.2	14.9	60.3	0.7	8.5
VN	Local SBSSCS	14.2	16.3	51%	7.6	3.9	179.3	107.7	1.0	16.0
Reg.		**14.3**	**11.0**	**60%**	**4.3**	**2.6**	**66.4**	**47.1**	**0.9**	**15.7**

1. **PH and MY:** Independent operations of Local SCS and SBS, both with low utilization (<60%), indicating possible **low incoming volume and /or excess manpower**
2. **SG:** SG's low productivity mainly due to **low incoming volume**
3. **VN:** Low utilization combined with the longest AHT driven by **high FRT and ART**, likely due to agent case handling **SOP inefficiencies** and **high max concurrency**

Note:
- Current productivity analysis is based on shops which have migrated to the inhouse system
- Data range is from 01-31 Mar 2025

SIP Performance | Chatbot CSAT is significantly low for all markets at 35%; TH and TW face high agent costs while SG, MY and PH have suboptimal agent productivity

Market	Cost					UX					Revenue
	Cost per 1K Order	# L1 agents	Cost per Agent	Chat Deflection Rate	Agent Productivity	Shop CSAT	Chatbot CSAT	Agent CSAT	Avg. Response Time (s)	Chat Abandoned Rate	Shop Conversion Rate
2 SG	21.2	43	$600	57.52%	8.2	40.81%	1 25.46%	57.26%	38.6	0.63%	10.53%
3 MY	14.2	39	$600	56.05%	9.2	55.39%	44.50%	62.02%	21.9	0.71%	9.14%
4 TH	62.1	13	$1,318	54.37%	13.9	63.64%	34.31%	84.74%	25.8	0.21%	9.51%
TW	299.4	10	$1,565	60.69%	10.3	68.92%	55.84%	79.71%	13.5	0.46%	10.07%
2 VN	22.9	3	$735	69.57%	13.4	62.36%	32.05%	79.88%	76.7	0.33%	10.76%
3 PH	14.9	23	$688	78.21%	4.7	47.89%	37.58%	80.71%	67.3	0.22%	8.89%
Reg	**38.6**	**230**	**$750**	**63.11%**	**8.9**	**52.99%**	**35.22%**	**71.76%**	**36.6**	**0.51%**	**9.61%**

1. **Chatbot CSAT for CB SIP (~35%)** has **significant scope of improvement, due to NLU Chatbot and a lack of maintenance**
2. **SG, VN: Cost per 1K order slightly higher** at ~$22 driven by low order volume (VN) and low productivity (SG)
3. **MY, PH:** Have **lowest cost per 1K order** at ~$14 driven by low agent costs; however can improve in agent productivity and CSAT to drive higher conversion rates
4. **TW, TH: Cost per 1k order is significantly high** due to low order volumes, high agent costs and lower chatbot deflection (TH using FTEs)

Next Steps:
- ***SIP CS team ramping up***
- ***Switch to latest LLM bot***
- ***TW prioritised for shift to ID***

Date Range: 01-16 Mar'25; # of Agents and Cost per Agent data based on Dec'24

[Productivity] SIP | Low utilisation in SIP across SG, MY, TW, and PH (16–51%) resulted in poor productivity (<10); high FRT and ART in SID and VN SIP suggest potential SOP inefficiencies

MKT	BL	Productivity metrics				Supporting metrics				
		Prod.	AHT	Utilization	Max conc.	Actual conc.	Agent FRT (sec)	Agent ART (sec)	Occupancy	Chat / hour
SG	Local SIP	8.5	8.1	39%	2.9	1.1	30.4	50.0	0.7	9.1
MY	Local SIP	8.2	5.5	51%	1.5	0.8	42.6	24.5	0.6	9.5
TH	Local SIP	15.7	6.7	62%	2.7	1.7	67.0	26.0	0.7	16.3
TW	Local SIP	8.0	3.5	16%	3.0	0.5	125.7	20.2	0.3	8.6
VN	Local SIP	13.2	14.0	37%	8.6	3.2	253.7	68.9	0.9	14.5
PH	Local SIP	4.8	7.6	18%	3.0	0.5	31.1	69.1	0.5	5.0
SG	SID	14.2	9.1	70%	2.9	2.0	63.9	69.9	0.9	14.7
MY	SID	15.2	10.3	84%	3.0	2.5	30.5	77.2	1.0	15.7
PH	SID	13.3	9.4	70%	3.0	2.1	28.2	73.1	0.9	13.7
Reg.		**11.2**	**8.8**	**54%**	**3.0**	**1.6**	**47.9**	**59.2**	**0.8**	**11.9**

1. **SIP in SG, MY, TW, PH: Low productivity (<10)** and utilisation (16–51%) likely driven by low volume, as reflected by low occupancy and chats/hour
2. **TW SIP: High agent ART** despite low concurrency, suggesting potential agent idling and weak management control
3. **VN SIP:** Low efficiency with longest FRT and high ART, possibly due to high max concurrency
4. **High agent ART** above e-commerce industry benchmark (60s), indicating need for SOP review and optimisation

Note:
