[Topline]

Local SIP: proj 167k ADO, 107% RR, CB% +0.16pp MoM; proj $1.63M ADG, 99% RR, CB% -0.04pp MoM; ADO outperform while ADG miss target because of MYSG lane; in Sep MYSG lane P&L revised to breakeven + price raise, leading to lower ADO; loss in MYSG ADO was offset by growth across other lanes; however, other lanes have lower ABS vs MYSG, leading to weaker ADG performance.

CNSIP: proj 30k ADO, 91% RR, CB% +0.01pp MoM; proj $263k ADG, 95% RR, CB% +0.06pp MoM; RR<100% mainly due to lower marketing budget from stopping 5% seller P&L reinvestment Sep; ADO impact more than expected while P&L +$185k MoM.

Direct: proj 11k ADO, 99% RR, CB% +0.01pp MoM; proj $148k ADG, 103% RR, CB% +0.05pp MoM; ADO<100% mainly due to MYSG decline in traffic exposure (more details on slide 5).

WH cross-selling: proj 7.6k ADO, 82% RR, CB% -0.02pp MoM; proj $49k ADG, 78% RR, CB% +0.01pp MoM; mainly due to (1) CB FBS over-projection (78% RR) and (2) Local SCS (84% RR) lower topline from MYSG P&L revision to breakeven. Next step to revise WH cross-selling target [ETA 30 Sep].

SIP Seller standalone P&L - Sep EOM proj: Local SIP expected to land at $1,330k, +678k above target; CNSIP P&L pending data fix

Highlights

Seller/SKU count: +93%/+89% MoM across lanes; most lanes (except MYSG and THPH see SKU effi improving MoM alongside SKU growth)

ADO: missing target mainly due to MYSG underperform

1) MYSG 85% RR mainly due to ads spending -9% MoM and traffic exposure -18% MoM, likely due to 1) sunset of manual bidding to GMV max; 2) more intensive traffic competition in 9.9.; next step to explore alternative traffic booster with SGBD

2) VNMY 95% RR as most onboarded sellers chose to start sell after 9.9. leading to delayed ramp up. Expect to hit target by EOM, L7D ADO reaching 432

3) THPH 78% RR as TH local RMs have challenge in supporting Export acquisition and seller support; next step to 1) reduce 1:1 pitching to top 1000 managed sellers; 2) ramp up mass pitching

P&L: healthy, negative for some lanes mainly due to first 3-months commission waiver

CS - PH performance: Agent conversion +3pp MoM via new selling SOP rollout; all agent performance metrics met target for L2W; chatbot CSAT +4pp after 30% chats moved from old to new chatbot

Highlights

1. **Chatbot data:** due to SG migration, the chatbot data of ID-SG is mixed with other lanes in the same portal; to work with Reg CS and BI team to solve the issue
   - New LLM chatbot rollout for ID is planned for mid Oct
2. **Agent conversion rate improved to 16%** mainly due to implemented new upselling/cross-selling SOP training from Sep
3. **Average Response Time fluctuation in L7D:** due to insufficient monitoring from the BPO TLs, performance back to normal from 25 Sep and MTD ART still met target
   - Actions taken: 1) reinforced the importance of quick responses with TLs; 2) raised BPO ART target to 25s, a more challenging target will encourage greater attention and it makes achieving 30s more attainable

CS - SG performance [migrated to PH agents]: Agent migration PH at 80%, to complete by 30 Sep; agent productivity to reach target after full migration, all other agent performance metrics met target

Highlights

1 All agent performance met target for L2W; AWT recovered by enhancing peak-time and weekend WFM planning

2 **Understand from MY CS team that you would like to understand MY SIP chatbot performance, new chatbot rollout plan and coverage; updates as below**

- **SIP MY Chatbot performance:** CSAT and CR miss target, reason being MY SIP shops are still 100% covered by old chatbot, instead of the new LLM chatbot
- **New LLM chatbot rollout timeline:** from mid-Oct, to rollout 50% coverage
  - Context: during the A/B testing for new chatbot, SIP had lower deflection rate (due to poor listing quality), resulting in more chats routed to agents, additional agents are therefore required
  - rollout is planned to start after new agents are hired and trained up in PH, aligned with the PH migration process, so SIP new chatbot rollout timeline is behind SBS/SCS
- **Current Progress:** 5 additional agents have been hired to support new chatbot rollout and will complete training by the 2nd week of October

Performance

- **MYSG 95% RR, +0.2 days MoM; MYPH/TH MoM + 0.3 days:** MY SPX FM SOCs experienced 2 days backlog and subsequent snowball effect during 9.9, 9.15 campaign period
- **VNSIP MoM + 0.6~0.9 days:** FM LT increase 1 day due to serious backlog in HCM (southern states) FM SOCs during campaign period, affecting 60% of VNSIP volume
- **VNMY 97% RR, +0.9 days MoM:** shipment OB between 15 Sep - 20 Sep experienced continuous offloads as actual OB weight/CBM higher than BAU (=more heavy and bulky parcels), causing LH LT to increase 1-2 days. Backlogs have been cleared after 20 Sep, with LH LT recovered from 22 Sep
- **VNPH 99% RR, +0.2 days MoM:** mainly driven by the increase in FM LT, which VNPH has higher volume allocation to HCM hub

Oct focus

- **VN FM Network Optimization:** Work with VN SPX to shorten the delivery route for HCM warehouse and to reduce the touch points in FM SOCs during campaign
- **LH Ad-hoc Capacity Preparation:** to buffer in 10-15% of CBM increase for Oct/Nov planning to prepare for spike in bulky items
